

WHY USE SEPTO CLEAN?

SEPTO CLEAN GREATLY INCREASES THE LIQUEFACTION OF SOLID WASTES AND PREVENTS OFFENSIVE ODOURS.

SEPTIC SYSTEMS/ HOLDING TANKS

Only a perfectly designed system which is not being abused, will function perfectly. Unfortunately, this condition seldom exists. Because of this, the majority of septic systems will benefit from the increased action generated by Septo Clean. Pump out frequency will be reduced, odours eliminated and tile bed life will be dramatically increased. Even holding tanks benefit from elimination of odours and easier pumping.

Up to 800 gallon (3,000 l) tanks, flush ½ cup (60g) of Septo Clean down the toilet every 2 weeks.

If odours persist use a double dose or add 60g every week.

For systems over 800 gallons (3,000 l), use 1 cup (120g) every two weeks.

KENNELS

For odour prevention and waste reduction sprinkle Septo Clean over the dog run or cat litter. Septo Clean will not harm animals in any way.

OUTHOUSES

For complete odour control, and amazing reduction of mass, follow the directions below. If lime or other chemical products have been in use, slake with water daily for one week before using Septo Clean.

Before the first application of Septo Clean (each year), pour 2 buckets of water into each pit. Then sprinkle ½ cup (60g) over the mass. Repeat the dosage every two weeks. If odour persists, use 2 buckets of water before each application.

COMPOST TOILETS

Odour problems with compost toilets will be prevented by adding ¼ cup (30g) of Septo Clean to the humus.

COMPOSTING

To accelerate composting action and to prevent odours, sprinkle Septo Clean over the surface once a week or before each new layer of compostable material. Use ¼ cup (30g) per square foot of surface area.
